

The Visitors Management System

VisitorsGate

IdentyTech Visitors Management is an easy-to-use, web-based, enterprise class visitor management system. The IdentyTech visitor management system is also a part of IdentyTech access control solution which integrates a biometric access control terminals, video management, intruder alarm system management & much more.

The screenshot displays the IdentyTech Visitors Management System interface. On the left is an 'Address Book' sidebar with a search bar and a list of contacts: VMS Operator, Member 1, Marina Golouboy, and Admin VMS. The main area is titled 'Scheduled Visits' and contains a search form with fields for User ID, Name, Entity, Tag Code, and Email. Below the search form is a table of scheduled visits. The table has columns for Name, Status, and Time. Two entries are shown: 'No Name' and 'Marina Golouboy', both with a status of 'CHECKED OUT' and a time range from 08:00 AM to 05:00 PM on 04/11/2015. To the right of the table is a summary panel for the current date (Sat, 04/11/2015) showing visitor statistics: Approved (0), Rejected (0), Blocked (0), Expected (0), Approved accompanied (0), Checked In (0), Checked Out (2), and Total (2). There is also an 'EMERGENCY REPORT' button at the bottom of the summary panel.

Name	Status	Time
No Name	CHECKED OUT	04/11/2015 08:00 AM → 04/11/2015 05:00 PM
Marina Golouboy	CHECKED OUT	04/11/2015 08:00 AM → 04/11/2015 05:00 PM

Features that make a difference

Easy management

- A system administrator can easily create additional users and security officers
- Easily schedule a new visitors from anywhere by simply logging into your account

Efficient

- Track who and where the visitors are visiting within a facility.
 - Monitor a “Black list” of a banned visitors

Paperless reporting

- Monitoring of a scheduled visits and quick look up of visit details
 - Logging and tracking of all transactions

How it works?

IdentyTech VisitorsGate™ system is a cloud based system. Each customer receives a proprietary domain address such as: comapanyname.visitorsgate.com. The hosts (such as residents or companies within the facility) will be able to access the system by this URL. It is not required to be on site in order to schedule a new visitors, hosts can access the system any time from anywhere via the internet.

Together with an access control system (biometric terminals) installed on site IdentyTech VisitorsGate™ provides a customer with complete residential and visitors management solution. The VisitorsGate™ system also integrates well with an existing DSX vehicle barcode scanning system(in case such system installed on site).

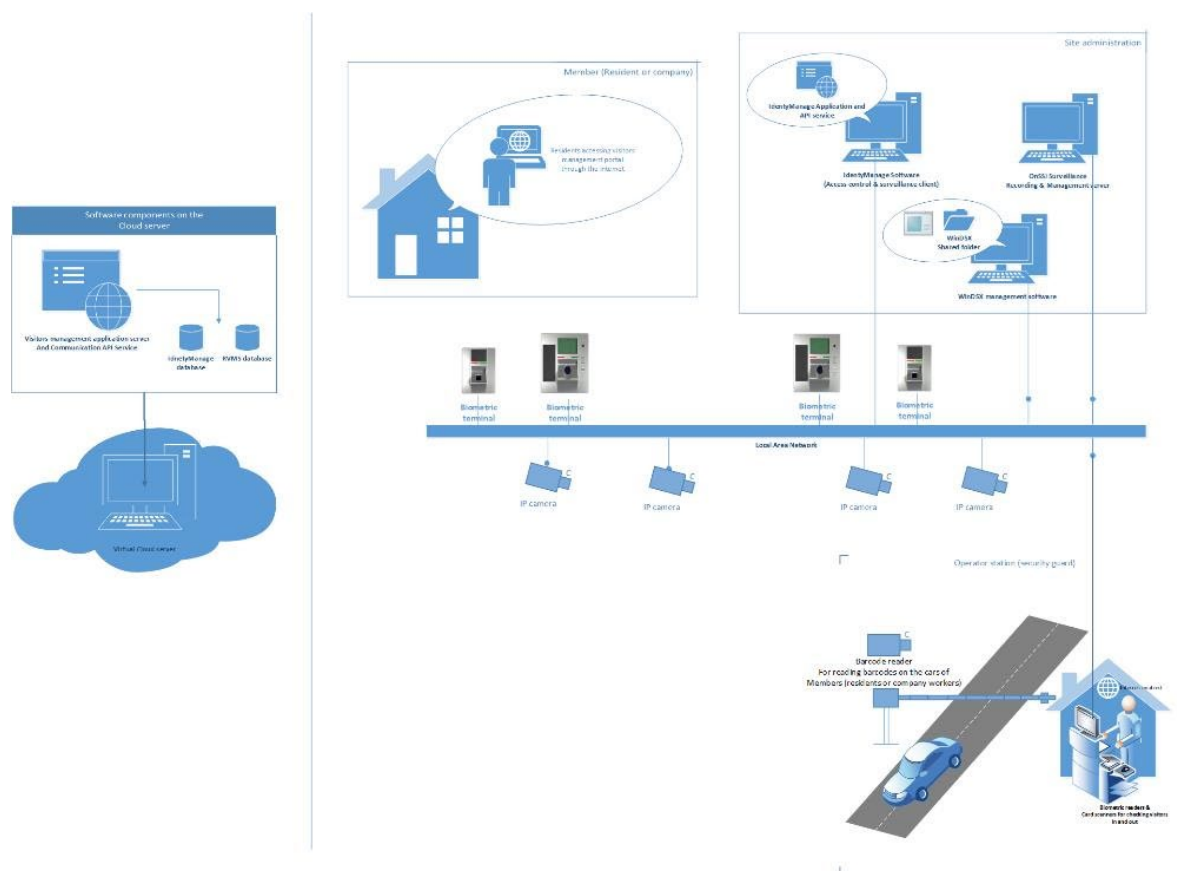

Once a visors arrives on site, his driving license is being scanned at the one of the “Operator” stations. In case the visitor is found on the list of scheduled visits the system will automatically popup the visit details. In case the visitor is not scheduled, the operator has an ability to put a new invitation. In case the visitor was detected in black list, the system won't allow to check in the visitor.

The site administrator is able to block the visitors in case he finds suspicious or they are defined as a trouble makers. Administrator of the facility is also responsible for registering new hosts (residents, companies etc.). Each host (member) registered at the system receives a username and password and able to login to the system to schedule a new visits.

System Architecture

The system contains of the following components:

1. Visitor management application server on the cloud server accessible from the internet.
2. Local access control system which includes the following component
 - Access control management
 - Barcode scanning system
