

## signoAPI (PDF-Signature)

---

### Description

---

With our APIs you are able to develop your own applications for simple or advanced electronic, handwritten signature or to extend existing systems.

The signoAPI is a powerful programming interface for system integrators. It has a simple interface for capturing a signature via a signature pad, Tablet-PC or mobile device as well as a complex interface for a ISO- and Adobe DigSig-compliant signature of PDF documents.

In addition, it provides features to view, edit, validate (and even more) PDF documents.

Various source code examples in different programming languages are available. These will give you a quick and easy introduction into the functions.

In addition to a native Windows and Linux (Java) version, there are variants for Apple iOS and Android.\*

---

*Hint: If you are looking for a powerful interface for signotec signature pads, we offer the free of charge "signoPAD-API". With this you can control the pad completely. Display pictures, texts, documents, buttons (etc.) and capture a signature in various variations. The signoPAD-API can also be used in combination with the signoAPI, for example, to display and sign a document.*

---

## Highlights

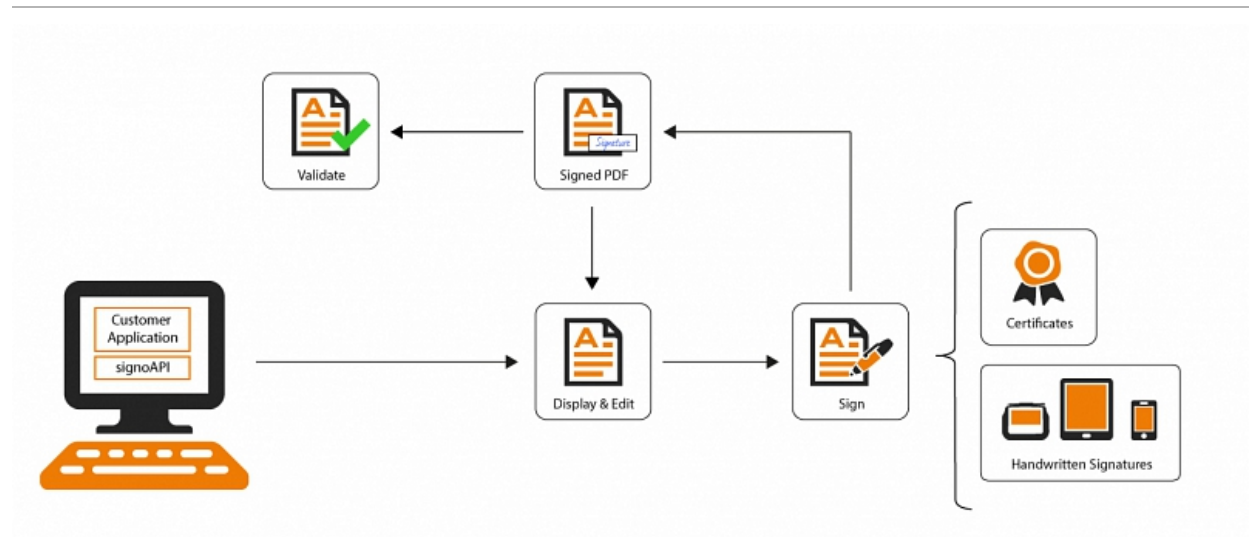

---

The signoAPI provides simple components for capturing a signature and digitally signing PDF documents.

*Hint: If you want to use more complex functions of the signotec signature pads, you will need the free "signoPAD-API".*

- Simple interface for capturing signatures
- Capture of image and biometric data
- Interface for signature pads, Tablet-PCs and mobile devices
- PDF display and navigation
- PDF editing
- PDF signature
- ISO- & Adobe DigSig-compliant
- Authenticity protection
- Signature validation
- Extensive documentation
- Various source code examples and demo applications

## Example Integration

## Integration

The integration takes place via various components\*, depending on the operating system. All components are available as 32- and 64-bit version.

In addition to the components, the download package also includes demo applications (including source code) as well as extensive documentation.

### Programming Languages

- C#
- VB
- C++
- Delphi
- VB6
- Java
- Objective-C
- Swift
- *and more...*

### Operating Systems\*

- Windows (Native)
- Windows (Java)
- Linux (Java)
- Apple iOS
- Android

## Demo

---

The signotec signoAPI is available as a free demo. You can request the the download directly from us.

The download contains everything you need:

- All mentioned API components
- Documentation
- Demo Applications
- Source code Projects

## System Requirements

---

The system requirements vary depending on the product\* and operating system. Please refer to the exact requirements of the respective documentation.

---

*\* Please note that the signoAPI is a separate product for each operating system. Due to the different system environments, the same functionalities can not be offered across all platforms. For more information, please do not hesitate to contact us..*
